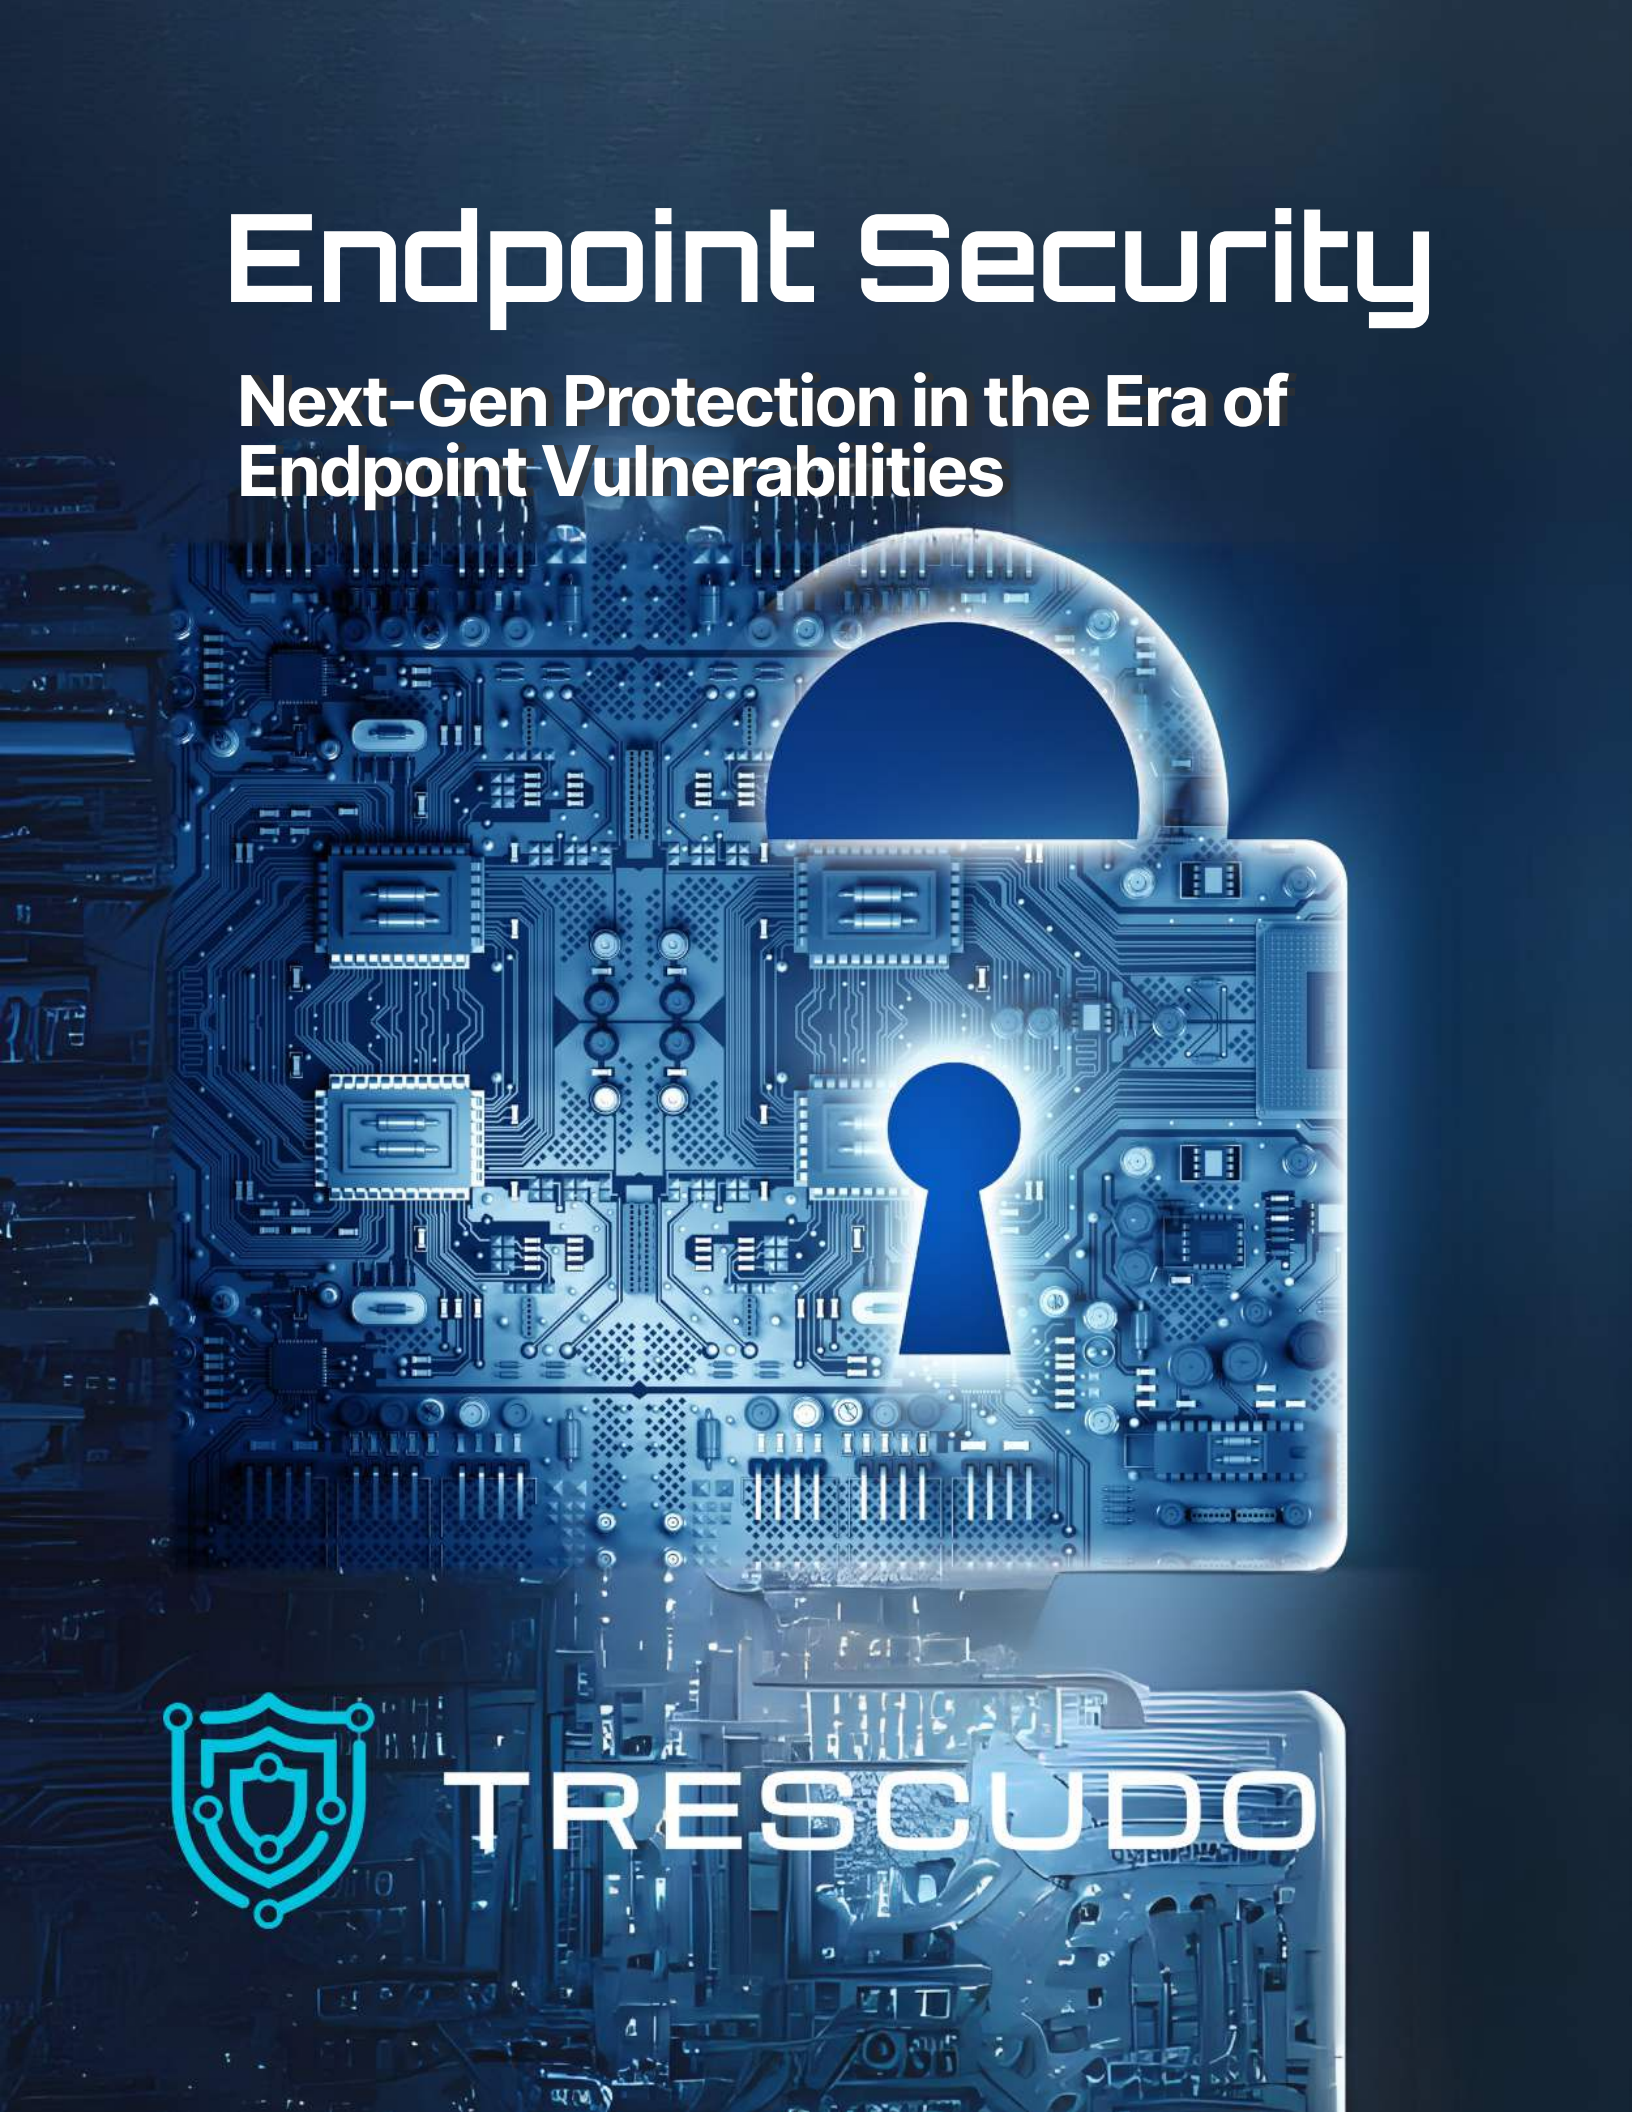
Endpoint Security

Next-Gen Protection in the Era of Endpoint Vulnerabilities



TRESCUDO

The Endpoint is the New Perimeter

With a distributed workforce, your endpoints—laptops, servers, and cloud workloads—are the primary target for sophisticated attacks. Traditional antivirus is no longer enough to stop fileless attacks and modern ransomware, while overwhelmed security teams struggle to respond to alerts before the damage is done.

The Framework-Driven Solution:

Autonomous Protection for Every Endpoint

Trescudo's approach is centered on the NIST CSF Framework's "**Protect**," "**Detect**," and "**Respond**" functions, but with a modern, autonomous focus. We believe your defense must be faster and smarter than your adversaries. Our goal is to end threats at machine speed.

Our strategy provides:

- **Real-time Threat Prevention:** Stopping malware and exploits before they can execute.
- **Deep Visibility:** Understanding the root cause and attack chain of any potential incident.
- **Automated, One-Click Response:** Instantly remediating threats and even rolling back endpoints to their pre-attack state to neutralize ransomware in seconds.

The Technology:

AI-Powered Autonomous XDR

To achieve this, we implement the market-leading **SentinelOne Singularity™** Platform, recognized as a Leader in the **Gartner® Magic Quadrant™** for Endpoint Protection Platforms. This single, autonomous agent replaces outdated antivirus and consolidates:

- **Endpoint Protection (EPP):** AI-powered prevention of malware and zero-day exploits.
- **Endpoint Detection & Response (EDR):** Deep visibility for simplified threat hunting.
- **Extended Detection & Response (XDR):** A unified view of complex attacks by ingesting data from cloud, identity, and network security layers.

With Trescudo, you get an intelligent, autonomous platform that ends breaches, not just detects them.

Trescudo Solution

In a landscape where endpoints have become the new battleground for cyber threats, Trescudo offers a cutting-edge solution that goes beyond traditional antivirus. Leveraging the NIST CSF framework with AI-powered technology, it provides real-time threat prevention, deep visibility into attacks, and automated responses to neutralize threats swiftly. With the SentinelOne Singularity™ Platform at its core, Trescudo ensures your defenses are not just reactive but proactive, ending breaches before they escalate.
