

Vulnerability & Identity Security

**A New Approach to Safeguarding
Digital Identities and Systems**

TRESCUDO

Vulnerability & Identity Security

The Challenge:

A Broken Remediation Cycle & Stolen Credentials

Traditional vulnerability management is broken. Security teams are flooded with CVEs, while the gap between finding a vulnerability and patching it leaves a wide window of exposure. This reactive cycle can't keep pace with modern threats, especially when unpatchable legacy systems and stolen privileged credentials create permanent risks.

Trescudo moves beyond the outdated scan-and-report cycle. Our approach, grounded in the NIST CSF Framework's "**Identify**" and "**Protect**" functions, provides a single platform to not only identify vulnerabilities but to fix them instantly, while rigorously controlling access to your critical assets.

Our strategy delivers:

- **End-to-End Vulnerability Remediation:** Consolidate discovery, prioritization, and remediation into a single, efficient workflow.
- **Instant Protection:** Shield vulnerable applications *before* a patch is available, closing your window of exposure.
- **Robust Privileged Access Control:** Secure, monitor, and audit all privileged user access across your infrastructure.

The Framework-Driven Solution:

A Unified, Proactive Remediation Platform

The Technology:

AI-Powered Remediation & Leading PAM

Our solutions are built on a foundation of innovative and market-proven technologies. We leverage platforms from Vicarius and Segura that provide:

- **Patchless Protection™:** Instantly shield vulnerable applications in memory, blocking any attempt to exploit the known weakness.
- **AI-Powered Remediation (vuln_GPT):** Generate custom remediation scripts for complex or unpatchable vulnerabilities.
- **Gartner Magic Quadrant™ leading Privileged Access Management (PAM)** to secure credentials and secrets.

With Trescudo, you can proactively close your biggest security gaps and protect your most critical assets.

Vulnerability & Identity Security

Discover how traditional vulnerability management fails to keep pace with modern threats, leaving organizations exposed to relentless risks. Trescudo presents a unified, proactive platform that not only identifies but instantly remediates vulnerabilities, while effectively controlling privileged access to critical assets. Embrace the next generation of cybersecurity with AI-powered solutions that provide immediate protection and close security gaps before they can be exploited.
